Software Engineer  
23

*July 10, 2024*

from Tan Karageldi

I'm currently in my fourth year at Mount Allison University working on my Bachelor of Science, with a major in Computer Science and minor in mathematics. I aspire to be a Software/Artificial Intelligence Engineer, and I'm excited to learn more about the evolving AI world and bring new horizons to it.

I would like to believe that I have a creative soul, I design clothes, make music, and write some code to make those ideas become reality. Learning has always been a passion for me, I'm always in search of knowledge, on any topic that can contribute to my personal growth. I like creating websites, games, and solutions to interesting problems using my knowledge in various programming languages. I am determined and motivated to succeed in everything I do, and I try to enjoy every day of the journey. Currently, I am spending my summer working freelance creating websites for local clients in my city and learning about machine learning and artificial intelligence.

All the projects I made, from coding projects to clothing designs, can be found on the projects section of this website.

Thank you for taking the time to get to know about me.
